## HOW TO FIX SEO FRIENDLY URL TEST

- In order for URLs to be SEO friendly, they should be clearly named for what they are and contain no spaces, underscores or other characters. You should avoid the use of parameters when possible, as they are make URLs less inviting for users to click or share.
- If your website is new and is not indexed by search engines you can replace underscores with hyphens or redirect those links to URLs that use hyphens. BUT, if your website is ranked well by search engines you do not need to do this (probably you have other ranking factors working very well).
- The general advice remains: build links that contain hyphens rather than underscores and avoid dynamic URLs.

### Image Alt Test

- ✖ Your webpage has **18** 'img' tags and **13** of them are missing the required 'alt' attribute.

## HOW TO FIX IMAGE ALT TEST

In order to pass this test you must add an **alt** attribute to every **<img>** tag used into your webpage.

An image with an alternate text specified is inserted using the following HTML line:

```

```

Remember that the point of alt text is to provide the same functional information that a visual user would see. Search engines, users who disabled images in their browsers and other agents who are unable to see the images on your webpage can read the alt attributes assigned to the image since they cannot view it.

### Inline CSS Test

- ✖ Your webpage is using **5** inline CSS styles!

## HOW TO FIX INLINE CSS TEST

It is a good practice to move all the inline CSS rules into an external file in order to make your page "lighter" in weight and decrease the code to text ratio.

- check the HTML code of your page and identify all style attributes
- for each style attribute found you must properly move all declarations in the external CSS file and remove the style attribute

For example:

```
<!--this HTML code with inline CSS rule:-->
<p style="color:red; font-size: 12px">some text here</p>

<!--would became:-->
<p>some text here</p>

<!--and the rule added into your CSS file:-->
p{color:red; font-size: 12px}
```

### Deprecated HTML Tags

<b>Social Media Check</b>	<p>✓ Congratulations! Your website is connected successfully with social media using: <a href="#">Facebook</a>; <a href="#">Twitter</a>;</p>

SPEED OPTIMIZATIONS	
<b>HTML Page Size Test</b>	<p>✖ The size of your web page's HTML is 78.79 Kb, and is over the average web page's HTML size of 33 Kb.</p> <p>This can lead to slower than average load times, <a href="#">lost visitors</a>, and decreased revenue. <b>HTML Compression/GZIP Test</b>	<p>✓ Congratulations! Your page is successfully compressed using <b>gzip compression</b> on your code.</p> <p>Your HTML is compressed from <b>241.62 Kb to 78.79 Kb (67 % size savings)</b>. This helps ensure a faster loading web page and improved user experience.</p>
<b>Site Loading Speed Test</b>	<p>✓ Your site loading time is around <b>3.454 seconds</b> and this is under the average loading speed which is <b>5 seconds</b>.</p>
<b>Page Objects</b>	<p>✖ Your page has more than 20 http requests, which can slow down page loading. You can try <a href="#">reducing http requests through various methods</a> such as using text instead of images, using css sprites, <a href="#">using data URIs instead of images</a>, or combining several external files together into one.</p> <hr/> <p>HTML Pages: 11; CSS Files: 3; Scripts: 76; Images: 61; Flash Files: 0;</p>

<b>Image Expires Tag Test</b>	<p>✗ Your site is not using expires headers for your images. An expires tag can help speed up the serving of your webpages for users that regularly visit your site and see the same images. Learn more about <a href="#">how to add expires headers to your images</a>.</p> <hr/> <p><b>HOW TO FIX IMAGE EXPIRES TAG TEST</b></p> <p>In order to reduce the number of HTTP requests, you can use the HTTP Expires header to set an expiration time for your images or any other content type. ## URL Redirects Checker

!	Your URL performed one redirect! While redirects are typically not advisable (as they can affect search engine indexing issues and adversely affect site loading time), one redirect may be acceptable, particularly if the URL is redirecting from a non-www version to its www version, or vice-versa.  → from: <a href="http://mightandmagic.wikia.com/wiki/zardoc">http://mightandmagic.wikia.com/wiki/zardoc</a> to: <a href="http://mightandmagic.wikia.com/wiki/Zardoc">http://mightandmagic.wikia.com/wiki/Zardoc</a>

## SERVER AND SECURITY

<b>URL Canonicalization Test</b>	✓ <a href="http://mightandmagic.wikia.com/wiki/zardoc">http://mightandmagic.wikia.com/wiki/zardoc</a> and <a href="http://www.mightandmagic.wikia.com/wiki/zardoc">http://www.mightandmagic.wikia.com/wiki/zardoc</a> resolve to the same URL.
<b>HTTPS Test</b>	✗ Your website is not using https, a secure communication protocol. Even for sites that do not collect sensitive customer information, search engines suggest that <a href="#">switching to https is an increasingly good idea and may help improve rankings</a> . Note: if your site relies primarily on adsense income, be aware that <a href="#">using https may be detrimental to ad earnings</a> .
	<b>HOW TO FIX HTTPS TEST</b> If your website needs a secured authentication or an encrypted transfer of data, you need to install an SSL certificate in order to provide a secure connection over HTTPS protocol. <a href="#">HERE</a> is a "step by step" guide to purchase and install an SSL certificate.

Botnet scripts that automatically look for vulnerabilities in your software are sometimes identified as User-Agent libwww-perl. By blocking access from libwww-perl you can eliminate many simpler attacks. Read more on <a href="#">blocking Libwww-perl access</a> and <a href="#">improving your website's security</a> .
	<b>HOW TO FIX LIBWWW-PERL ACCESS TEST</b> In order to pass this test you must block the libwww-perl user-agent in your <b>.htaccess</b> file. If your site is running on apache server, you could put these lines in your <b>.htaccess</b> after <b>RewriteEngine on</b> line:  <pre>RewriteCond %{HTTP_USER_AGENT} libwww-perl.* RewriteRule .* ? [F,L]</pre>
<b>Plaintext Emails Test</b>	✓ Congratulations! Your webpage does not include email addresses in plaintext.

## ADVANCED SEO

### Microdata Schema Test

- ✗ Your webpage doesn't take the advantages of HTML Microdata specifications in order to markup structured data. View Google's guide for [getting started with microdata](#).

#### HOW TO FIX MICRODATA SCHEMA TEST

HTML5 Microdata is an easy way to add semantic markup to your web pages. Search engines rely on this markup to improve the display of search results, making it easier for people to find the right web pages.

Here is a simple example of how to use HTML5 microdata in your contact web page:

```
<div itemscope itemtype="http://schema.org/Person">
  <span itemprop="name">Joe Doe</span>
  <span itemprop="company">The Example Company</span>
  <span itemprop="tel">604-555-1234</span>
  <a itemprop="email" href="mailto:joe.doe@example.com">joe.doe@example.co
m</a>
</div>
```

### Noindex Checker

- ✓ Your webpage does not use the noindex meta tag. This means that your webpage will be read and indexed by search engines.

## Canonical Tag Checker

- ✓ Your page is using the canonical link tag. This tag specifies that the URL: <http://mightandmagic.wikia.com/wiki/Zardoc> is preferred to be used in search results. Please ensure that this specification is correct, as canonical tags are often hard-coded and may not always reflect the latest changes in a site's URL structure.
- 
- <link rel="canonical" href="http://mightandmagic.wikia.com/wiki/Zardoc" />

## Nofollow Checker

- ✓ Your webpage is using the nofollow meta tag. You are advised to use this tag carefully since search engines will not crawl all links from your webpage.
-
